

In this project, they conduct some experiments to analyze the feature extraction methods and classifiers to the classification accuracy. To analyze the quality of extracted features, they visualize the features using PCA. Meanwhile, they show the comparison on classification accuracy. Finally, they analysis and summarize their discovery.

Pros:

The report is clear, good written and easy to understand.

They make an analysis to summarize their discovery and share some insights.

Cons:

They miss to cite some existing algorithms (e.g. ResNet18)

They conduct the experiment on only one DNN models (ResNet)
