1 Summary

This report conduct an empirical study and investigation on MAML model. This group not only reproduces MAML on image classification and study how to make it work and conduct ablation hyper-parameter study on image classification tasks, but also try MAML on some new dataset and try to improve MAML with some practical strategies

2 Strength

This reports is organized based on a new method, they describe the model and show how this method works under the classification tasks. Besides, they gives us the result of applying the method to another dataset.

3 Weakness

This report does not use any graph about the result, which may not so directly show us the results.

4 Evaluation

This report is well organized. Besides their claims are well supported by theoretical analysis and experimental results and gives an appropriate evaluation about the methods.

5 Overall rating

After browsing the paper without checking the details, I will give this reports 5 points
