• Summary of the report.

This report conducted a series of experiments using VGG-19 and scattering wavelet to extract features of MNIST dataset. Based on the results of SVM classifier and visualization, the author then conclude the experiments with some analysis.

• Describe the strengths of the report.

- Visualization of the feature maps.
- Tried 6 kinds of visualization methods.

• Describe the weaknesses of the report.

- Lack of analysis about the classification accuracy.

• Evaluation on Clarity and quality of writing (1-5): 4

• Evaluation on Technical Quality (1-5): 3

• Overall rating: (5- My vote as the best-report. 4- A good report. 3- An average one. 2- below average. 1- a poorly written one).

3

• Confidence on your assessment (1-3) (3- I have carefully read the paper and checked the results, 2- I just browse the paper without checking the details, 1- My assessment can be wrong)
