• Summary

This group implement the wavelet scattering feature extraction and classification on MNIST, CNN for training based on Raphael paintings as well.

• Strength

They use two datasets for experiment, visualizing features and making classification as well.

• Weakness

The module of conclusion for whole project does not exist.

• Clarity and quality of writing: 3

It would be better to make some comparison and explanation.

• Technical Quality: 3

Several methods are used to deal with two datasets.

• Overall rating: 3

• Confidence: 2
